

Lean AI Agent
KAI
by TBM Consulting Group

Put Lean Expertise Everywhere. Accelerate Every Decision.

ANSWER ANY OPERATIONAL QUESTION

Ask KAI about any operational problem in plain language, and it will:

- Answer using thirty-five years of captured TBM Lean expertise.
- Show the source behind every answer, so teams can verify and trust it.
- Link the data pattern to the right Lean method.
- Guide the response with contextual coaching.

QUANTIFY AND PRIORITIZE THE OPPORTUNITY

Working through operational data step by step, KAI ensures:

- The size of the opportunity is quantified, not just the symptom.
- What discipline can fix is separated from what needs investment.
- Priorities are ranked, so teams know where to start.
- Nothing falls through the cracks between shifts.

COACH INSIDE THE TOOLS TEAMS ALREADY USE

Embedded directly in PowerHour and LeaderPro, KAI:

- Reads live production data in PowerHour and answers questions while the shift is running.
- Turns Leader Standard Work data in LeaderPro into coaching guidance.
- Recommends specific next actions to close the gap.
- Requires no new system for teams to learn.

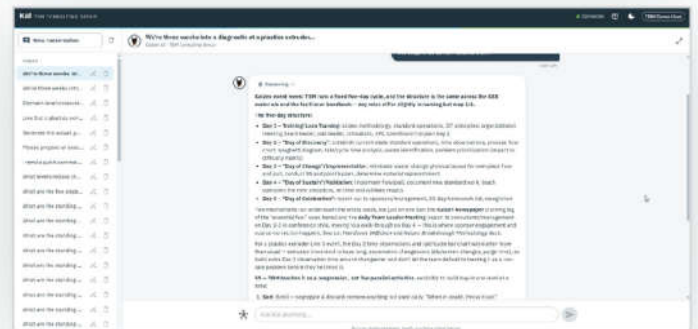

What Is KAI?

Lean expertise sits with only a few people on your floor. KAI puts it everywhere the work happens.

KAI is TBM's Lean AI agent — an intelligent assistant that puts thirty-five years of captured TBM Lean expertise into the hands of every operator, supervisor, and leader, right where the work happens. Ask it about a real operational problem in plain language, the way you'd describe it to a consultant, and KAI answers using TBM's proven Lean methodology — and shows you exactly where the answer came from.

The Benefits of TBM's KAI Lean AI Agent

KAI works through your operational data step by step, quantifies the size of the opportunity, and separates what discipline can fix from what genuinely needs investment — so teams always know where to start. Because it's embedded directly inside PowerHour and LeaderPro, there's no new system to learn.

How KAI Works

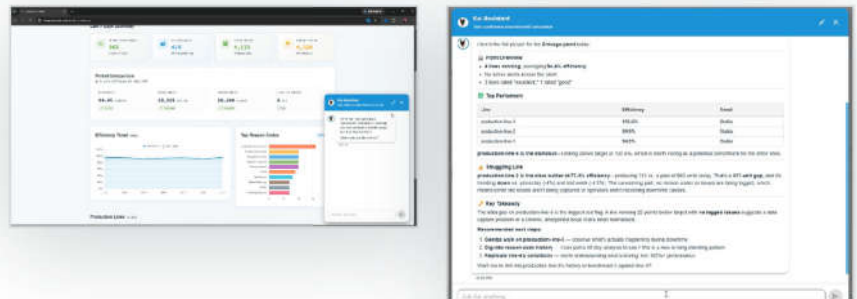

KAI operates inside the TBM applications your teams already use, reading live operational data and turning it into Lean guidance in real time.

Inside PowerHour

KAI reads live production data during the shift, flags anomalies and performance gaps for escalation, and recommends specific countermeasures — while the shift is still running.

WHAT KAI DOES IN POWERHOUR:

- Real-time analysis of hour-by-hour production data.
- Anomaly and performance-gap detection.
- Escalation flags and recommended countermeasures.

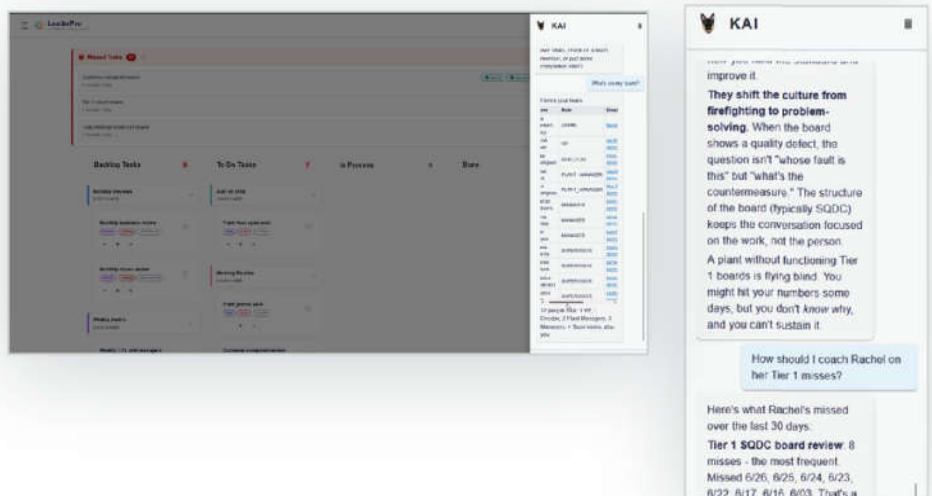

Inside LeaderPro

KAI turns Leader Standard Work data into coaching guidance, identifying execution gaps as they happen.

WHAT KAI DOES IN LEADERPRO:

- Leader Standard Work data turned into coaching guidance.
- Execution-gap identification.
- Source-linked recommendations leaders can verify and act on.
